EDUCATION

Kalinga Institute of Industrial Technology (KIIT)

B.Tech Computer Science & Engineering, CGPA: 8.07/10

Bhubaneswar, Odisha

Aug. 2024 – Jun. 2028 (Expected)

EXPERIENCE

AI Product Engineering Apprentice

ActTrident

Sept. 2026 – Present

Remote (United Kingdom)

- Engineer **stateful AI agent workflows**, **LLM orchestration pipelines**, and REST APIs using Python and FastAPI for cybersecurity solutions.
- Develop backend microservices, asynchronous pipelines, and database integrations following **secure software engineering** practices.
- Implement **threat modeling**, CI/CD automated deployments, and **least-privilege** security controls across cloud-enabled product modules.

AI/ML Project Contributor

Forgetube-Distributed LLM-Powered Video Pipeline | MLSA KIIT

2025

Bhubaneswar, Odisha

- Engineered an end-to-end **LLM-powered text-to-video generation pipeline** combining LLM scripting, Stable Diffusion XL, TTS, subtitles, and automated video assembly with zero manual intervention.
- Architected a **5-stage modular distributed pipeline** with independently upgradeable components, and integrated **RAG-based context grounding** to improve LLM output reliability and enable style-customizable video generation.

PROJECTS

Reviewly – Multi-Agent PR Reviewer | FastMCP, LangGraph, FastAPI, Redis, Docker

2026

- Designed scalable REST APIs and a custom FastMCP server exposing 4 GitHub tools consumed by a distributed multi-agent processing pipeline.
- Built parallel asynchronous agents for Security, Code Quality, and Test Coverage to reduce execution latency and structure production-grade review outputs.
- Developed an event-driven webhook service utilizing Redis deduplication and RQ-based async processing, debugging retry race conditions and containerizing the backend with Docker Compose.

HRFilms – Full-Stack Cinema Booking Platform | React, TypeScript, Supabase, Node.js, Vercel, Render

2026

- Engineered a production-grade backend handling high-concurrency real-time seat locking and transaction state transitions, eliminating race conditions during simultaneous user bookings.
- Secured multi-user data isolation via Supabase Row-Level Security (RLS) and managed asynchronous JWT session flows end-to-end across split deployments.
- Resolved 12+ edge cases involving authentication race conditions, concurrent seat conflict resolution, and atomic booking states.

Breast Cancer Classification — ML Model | Python, scikit-learn, NumPy, Pandas

2025

- Trained and evaluated a **Logistic Regression classifier** on the Wisconsin Breast Cancer Diagnostic dataset for malignant/benign tumor classification.
- Implemented feature preprocessing, scaling, train-test splitting, and model evaluation to assess classification performance and generalization.

TECHNICAL SKILLS

Computer Science Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Computer Architecture, System Design

Languages: Python, C++, Java, JavaScript, TypeScript, SQL

Agentic AI: LangGraph, FastMCP, MCP, Multi-Agent Systems, RAG, LLMs, Tool Calling, AI Service Orchestration

Backend: FastAPI, Node.js, REST APIs, Redis, Docker, JWT Authentication, Supabase, Firebase, Async/Event-Driven Systems

Frontend: React.js, Next.js, TypeScript, HTML, CSS

AI/ML: PyTorch, scikit-learn, NumPy, Pandas, Vector Databases (Qdrant), Semantic Search, LangSmith, Stable Diffusion XL, Gemini API, Groq API

Developer Tools: Git, GitHub, Docker, Linux, Modal (GPU), Vercel, Render, VS Code, Jupyter Notebook

CODING PROFILES

LeetCode: 150+ Problems Solved | 50-Day Badge

GitHub: 20+ Production & Backend Projects
